DeliveryExpert™

Leverages the latest in mobile and web technologies to provide an easy, accurate, and up-to-the-minute way to track, manage, and optimize this final link in the supply chain.

Reduces pickup and deliveries errors by scanning of the goods at the pallet level, case level or product level.

Increases driver's efficiency by reducing the time per stop and automating the pickup and delivery process.

Reduces invoicing errors by eliminating the paperwork and tracking delivery exceptions in real time.

Captures information regarding what was delivered, when it was delivered, where it was delivered and who signed for it.

Turns the data collected in the field into a real-time picture of the delivery status across multiple views and multiple resolutions.

Optimizes your delivery operations resulting in greater efficiency and improved customer service while saving you time and money.

Provides an advanced level of visibility and tracking that can greatly benefit companies with private fleets, third-party logistics providers and delivery companies.

DeliveryExpert™

To ensure high levels of customer service, the entire supply chain must be tracked and managed. You can no longer end the process once the goods have left the warehouse.

Made4net's pickup and delivery system, **DeliveryExpert™**, was designed to automate and manage the driver's work and provide real time visibility to the dispatchers and customer service representatives in the back office.

DeliveryExpert™ uses handheld mobile devices to capture data from the field and collect customer proof of delivery signatures. Delivery information can instantly be viewed and routes progress status can be tracked in real-time.

Whether you need to handle a customer claim that a delivery was not made, check the progress on a delivery route or know the status of a specific order being delivered, the **DeliveryExpert™** will close the information gap.

DeliveryExpert™ Key Features:

Driver task management	**Planned Vs actual routes analysis**
Pickup and delivery instructions per location	**RTLS / GPS real time driver location**
Real-time dashboard of routes progress	**Driver performance analysis**
Alerts of expected delays	**ASN to warehouse of expected goods**
Customer electronic signature capture	**Capture customer returns**

Made4net develops comprehensive and innovative software solutions to enable superior collaborative supply chain execution. Our mission is to help distributors and 3PLs leverage their logistics and supply chain operations by providing them an edge cutting IT solution with our **SCExpert™** platform.
